DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kawamura et al (6,220,230).

Kawamura discloses a method for checking the tightness vessel including tank system and a tank venting system of a motor vehicle having an internal combustion engine, the method comprising the steps of: blocking any supply to and discharge from said vessel (1); applying an overpressure or underpressure relative to atmospheric pressure to said vessel (column 5, lines 13-17); detecting a signal which characterizes a gas mass flow required for this purpose (T_d until the flow of vacuum to the fuel tank 1 is completed, col. 5, ll. 29-32); controlling said gas mass flow in order to obtain constant overpressure or underpressure; and, when a gas mass flow, which is constant in average, adjusts (varies), drawing a conclusion as to the presence of a leakage when said gas mass flow is greater than a pregiven limit value, see columns 4-6 and figures 1-4.

Note: the control (24) of the pressure the source (4) through the manipulation of the solenoid valves (28,18 and 30) to establish vacuum pressure, inherently and necessarily controls the mass flow rate of the air-fuel vapor mixture.

Allowable Subject Matter

3. Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 9-14 are allowed over prior art of record.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references show evaporative systems.
